Overview

Introduction

PayDollar PayGate is a powerful web-based online payment services platform, which provides secure, multi-channel, multi-lingual and multi-currency payment services. It is used by many renowned companies and organizations in the region.

This technical specification document prescribes the constituent parts of specification for integration of an e-commerce web site with PayDollar e-commerce service, the on-line payment service by AsiaPay (HK) Limited, by subscribed merchants of the service. This document has been created to ensure that all technical specifications contain sufficient information to enable a merchant to design and modify the codes of an existing on-line shopping architecture or software to cater for the payment –enabling service.

Integration

Requirement of Integration

Before integrating osCommerce with PayDollar payment page, make sure the following requirements are fulfilled :

1. osCommerce v2.2 RC2 is installed, configured properly and put the payDollar module files under the same directory as in the zip file.
2. You have obtained a PayDollar Merchant account, with merchant profile properly filled.
3. The payment method (e.g. VISA, MasterCard) you are going to select must be supported by PayDollar System. Check payment method details in the "Payment Account Information" of your merchant profile in PayDollar system to make sure appropriate payment method are enabled.

Configuration of administrative tool – Enabling the payment module

To use the pay by credit card function in osCommerce, configuration has to be done in the administrative tool to enable the pay by credit card payment module.

1. Enter Administration Page

Go to the administration page of osCommerce by entering the following address:

<http://www.yourdomain.com/catalog/admin/index.php>

The following page is displayed:

 - “02” – No challenge requested *
 - “03” – Challenge requested (Merchant preference)
 - “04” – Challenge requested (Mandate)
 - “05” – No challenge requested (transactional risk analysis is already performed) *
 - “06” – No challenge requested (Data share only)*
 - “07” – No challenge requested (strong consumer authentication is already performed) *
 - “08” – No challenge requested (utilise whitelist exemption if no challenge required) *
 - “09” – Challenge requested (whitelist prompt requested if challenge required)

Definition of Parameters in the Integration Page

The following are the parameters for integration. PayDollar PayGate is case sensitive. Make sure the typeface

is correct. When a transaction is finished, the system will return customer a payment message. Merchant can create static HTML pages to display the message.

Input /Return	Parameters (Required Fields are in Bold typeface) *Case Sensitive	Data Type	Descriptions
Input	orderRef	Text (35)	Merchant's Order Reference Number
	amount	Number	The total amount your want to charge the customer (up to 2 decimal place)
	currCode	Text (3)	The currency of the payment :
			“344” - HKD
			“840” – USD
			“702” – SGD
			“156” – CNY (RMB)
			“392” – JPY
			“901” – TWD
			“036” – AUD
			“978” – EUR
			“826” – GBP
			“124” – CAD

lang	Text (1) ("C","E","X","K", "J", "T")	The language of the payment page : "C" - Traditional Chinese "E" - English "X" - Simplified Chinese "K" – Korean "J" – Japanese "T" – Thai
merchantId	Number	The merchant ID we provide to you
pMethod	Text ("VISA", "Mas ter", "Diners", "JCB", "AMEX")	The payment card type
epMonth	Number(2)	Credit card expiry month
epYear	Number(4)	Credit card expiry year
cardNo	Text (16)	Credit card number
securityCode	Text (4)	Credit Card Verification Code - VISA: CVV (3-digit) - MasterCard: CVC (3-digit) - American Express: 4DBC (4-digit)
cardHolder	Text (20)	Credit card holder name
failUrl	Text (300)	A Web page address you want us to redirect upon the transaction being rejected by us (For display purpose only. DO NOT use this URL to update your system. Please use DataFeed for this purpose.)
successUrl	Text (300)	A Web page address you want us to redirect upon the transaction being accepted by us (For display purpose only. DO NOT use this URL to update your system. Please use DataFeed for this purpose.)
errorUrl	Text (300)	A Web page address you want us to redirect when unexpected error occur (e.g. parameter incorrect) (For display purpose only. DO NOT use this URL to update your system. Please use DataFeed for this purpose.)
payType	Text (1) ("N","H")	The payment type: "N" – Normal Payment (Sales) "H" – Hold Payment (Authorize only)
Optional Parameter for connect to our payment page		
Input	remark	Text An additional remark field that will appear in the confirmation email and transaction detail report to help you to refer the order

Datafeed

Purpose of Data Feed Page

Data feed page is used to receive a real-time result of payment from PayDollar. By comparing the payment information of order in your own database with the information from PayDollar in data feed page (by checking the Merchant's Order Reference Number – "Ref" from PayDollar data feed), you can verify whether the order exist in your own database. By further checking of success code from PayDollar and comparing the amount and currency of the payment, the payment status of order in your own database can be determined and updated.

Requirement to Data Feed Page

To use data feed function, merchant have to create a data feed page and inform the acquiring bank about the location of your page (e.g. <http://www.yourdomain.com/catalog/datafeed.php>). Merchant has to wait until the bank update the system in order to use this function.

The data feed page must meet the following requirement:

- Print **'OK'** in HTML when data captured (ACK message)
- **Make Sure to Print 'OK' for acknowledge to our system first then do the rest of your system process, if something wrong with your system process (i.e. download photo, ring tone problem) you can send a void request to our system, for more details please refer to our API guide and contact our technical staff.**

* Since the system will read from the data feed page for the word 'OK' to determine whether the (data feed) message is delivered or not, if this word does not return successfully, the system will assume the data feed is lost.

Definition of Parameters in the Data Feed Page

If merchant's web site supports data feed, the system can return payment message as shown in the following table.

Parameters	Data Type	Descriptions
------------	-----------	--------------

Data feed Output		
src	Number	Return bank host status code
prc	Number	Return bank host status code
Ord	Number (40)	Bank Reference – Order id
Holder	Text	The Holder Name of the Payment Account
successcode	Number	0- succeeded, 1- Failure, Others - error
Ref	Text	Merchant's Order Reference Number
PayRef	Number	Payment Reference Number
Amt	Number (15,5)	Transaction Amount
Cur	Number (3)	Transaction Currency i.e. "344" - HKD "840" – USD "702" – SGD "156" – CNY (RMB) "392" – JPY "901" – TWD
remark	Text (200)	A remark field for you to store additional data that will not show on the transaction web page
AuthId	Text	Approval Code

Configuration of administrative tool – Adding new orders status

Three new orders status which are not included in osCommerce are used in data feed page. Configuration

has to be done in the administrative tool to add orders status in osCommerce. Follow the procedures below to add the orders status:

“Payment Successful” – Transaction is accepted

“Payment Failed” – Transaction is rejected

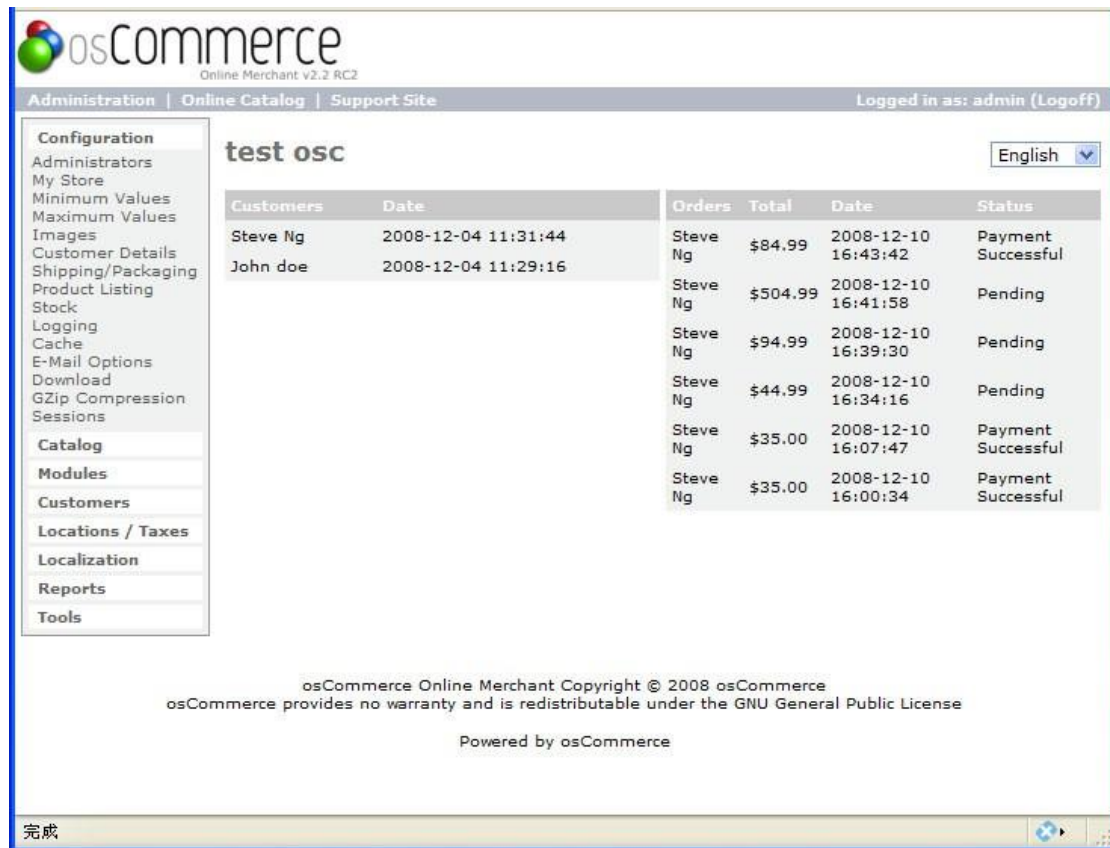

“Amount or Currency not match” – Payment amount or currency is not matched

1. Enter Administration Page

Go to the administration page of osCommerce by entering the following address:

<http://www.yourdomain.com/catalog/admin/index.php>
